PROFESSIONAL SUMMARY

Frontend developer who builds React and React Native applications on Laravel REST APIs, with MERN and Flutter projects of my own. Cut a page's load time from about 4s to 1.5s, fixed production authentication and offline-sync bugs, and rebuilt full frontends for a CRM and a mobile app. Former Aptech faculty with 2+ years of teaching experience who guided 50+ student projects to completion.

WORK EXPERIENCE

Software Engineer (Frontend / Mobile) - Techibits / ResERP, Karachi **Feb 2026 - Aug 2026**

- Cut page load time from about 4s to 1.5s by consolidating multiple API calls on one page into a single request, and removed prop drilling with Context API and Redux.
- Redesigned the full frontend of a Laravel-based CRM (header, footer, sidebar, animations), replacing unclear legacy code with a clean, reusable structure; rebuilt the UI of a React Native mobile app (TypeScript).
- Fixed an infinite-loading bug in React Native call-log sync (useEffect) and built an offline-safe flow: a no-network screen, preserved state, and call logs saved to local storage so no data is lost when connectivity drops.
- Fixed an authentication bug in the React web app where users stayed logged in with "Remember me" unchecked, and fixed missing bill PDFs by adding a download flow with an "open with" option, including Google Drive.
- Built a user profile page and a reusable attachment upload component, and made one button submit two separate panels (form data and attachment); fixed broken filters and added features across several pages.
- Shipped 10+ React and React Native screens and integrated 10+ REST API endpoints; edited Laravel endpoints and tested APIs with Postman.

Faculty, Web Development and Programming - Aptech, Karachi **Apr 2024 - Sep 2026**

- Invited by Aptech to intern after Semester 2 (Apr - Jun 2024), then promoted to faculty (full-time to Feb 2026, then Visiting Faculty).
- Taught JavaScript, React, Node.js and web development to 100+ students per term through hands-on projects.
- Mentored students 1:1 and guided 50+ student projects from idea to completion, improving code quality.

PROJECTS

Campus Coin - Student Budgeting Platform Live: campuscoin-97dc7.containers.snapdeploy.app
React, Vite, Node.js, Express, MongoDB GitHub: campuscoin-frontend, campuscoin-backend

- Built a full-stack budgeting app with JWT auth, role-based access, and Zod validation.
- Built an admin dashboard with user management, monthly budgets with progress bars and alerts, income-vs-expense reports, and a light/dark theme.

School Portal - Assignments and Attendance Live: portal-schools.up.railway.app
React, Redux, Node.js, Express, MongoDB GitHub: PORTAL-frontend, PORTAL-backend

- Built and deployed a portal with JWT auth, file uploads, configurable role permissions, assignment grading, attendance reports, and per-role dashboards.

BookStore Mobile Application GitHub: Book_Store_Flutter
Flutter, Dart, Firebase, Provider

- Built a bookstore app with cart, checkout, wishlist, and admin roles using Firebase and a Provider, Repository and Service architecture.

Online Recharge Platform GitHub: Online-Recharge
C#, ASP.NET Core MVC, Entity Framework Core, SQL Server

- Built an MVC web app for recharge services, users, purchases, and feedback, with CRUD workflows and EF Core persistence.

EDUCATION

Advanced Diploma in Software Engineering (ADSE) - Aptech Gulshan Center, Karachi (completed alongside teaching) **Feb 2023 - Feb 2026**

Intermediate - Govt. Degree College Boys Gulzar-e-Hijri, Karachi **2020 - 2023**

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Dart, PHP, C#, HTML5, CSS3
Frontend & Mobile (Core): React.js, React Native, Flutter, Redux, Context API, Tailwind CSS, Bootstrap, REST API Integration
Backend & Databases (Working Knowledge): Node.js, Express.js, Laravel, ASP.NET Core MVC, MongoDB, MySQL, SQL Server
Developer Tools: Git, GitHub (feature branches, pull requests), Postman, Firebase
